Coordinating street works

Smarter Scheduling is an innovative location-based platform that can help local governments and utility providers to identify cost savings and coordinate road opening activities across New South Wales (NSW).

Developed as a joint initiative between Department of Premier and Cabinet (DPC) and Land and Property Information (LPI), Smarter Scheduling NSW allows users to upload construction Projects and Exclusion Zones, and identifies Opportunities for coordination and collaboration.

Organisations upload information of their intended streetscape works, including the location and dates of disruption. Users are then able to search for planned works by project, opportunity, land parcel, property, suburb, or Local Government Area.
Additional features

Area of Interest
Use Smarter Scheduling to identify an area of interest, to receive notifications of proposed works.

Avoid scheduling conflicts
Smarter Scheduling can notify users of any scheduling conflicts or exclusion zones which may impact or delay planned operations.

Reports
Generate reports for your organisation to assess the benefits and efficiencies gained from using Smarter Scheduling.

Project details
Upload details of your projects to allow other users to share the cost of street-opening, resealing and traffic management.
Benefits
Smarter Scheduling NSW will help your organisation:
- cooperate with the local community
- collaborate for cost savings
- coordinate road-opening activities.

Other benefits of Smarter Scheduling NSW include:
- simple and easy to access
- anticipate conflicts of scheduling
- mobile and device agnostic
- improve spatial analysis capabilities
- minimise disruption to residents and businesses
- maximise benefits for residents, local councils and stakeholders.
Cost
Access to Smarter Scheduling NSW will be free of charge for the first 12 months, up to 30 April 2016. This includes three user licenses per organisation, unlimited access to the easy to use location platform, a customer support helpline and complimentary training as required.

Data requirements
Smarter Scheduling accepts the following data formats:
- Shape Files
- ArcGIS File Geodatabase
- CAD Files
- .csv Files
- MapInfo Files.
